

## Slush Machine Instructions

Thank you for placing your order with us! Below is an easy guide on how to use your rental slush machine.

\*Before you begin, we suggest the slush mix and water be cold before pouring into the machine, this way the mix will freeze faster.

For every 1 bottle of mix (1/2 gallon), use 4 bottles of water (1/2 gallon). Mix this separately before pouring into the machine.

**\*THIS MACHINE CANNOT HAVE ALCOHOL PUT INTO IT\***

**\*Alcohol additions need to be made in the individual's cup after the slush is poured\***

Once the mixture is chilled and ready to use, plug the machine into an outlet.

From there, click the green power switch and the two switches above it. This will get the liquid mixing in each separate side.

For a **COLD** beverage, click the top switches down.

For a **FROZEN** beverage, click the top switches up.
